Since Russia attacked Ukraine on 24 February, Ukrainian IT businesses have been fighting the aggressor in every possible way: volunteering, carrying out DDoS attacks against Russian websites, informational backlash, etc. Ukrainian IT business has become the economy's driving force, with software companies working, recruiting new employees and paying significant taxes to the state budget.

As Russia is aggressively attacking Ukraine, the Ukrainian economy is going through hard times.. Over 4 million refugees have fled to Europe and many businesses are not able to function because of logistical problems.However, the Ukrainian IT sector becomes the locomotive of the economy, remaining stable, retaining working places, and providing regular contributions to the state budget.

Ukrainian IT Sector Before the War

Before the war, the Ukrainian IT industry was worth \$5 billion, produced by more than 4,000 IT companies. In 2021 the number of Ukrainian specialists was 212 000, according to AIN.UA. In 2022, this number increased to 285,000 with 30% of them working in Kyiv, while the rest were based in Kharkiv, Lviv, Dnipro, and Odesa as IT

In 2021, the Ukrainian IT industry grew by 36% from USD 5 billion to USD 6.8 billion in exports. At the same time, the number of specialists increased from 244 thousand to 285 thousand. Thus, over the past three years, the industry has more than doubled in exports and has grown by more than 50% in the number of specialists.
